Elevating table

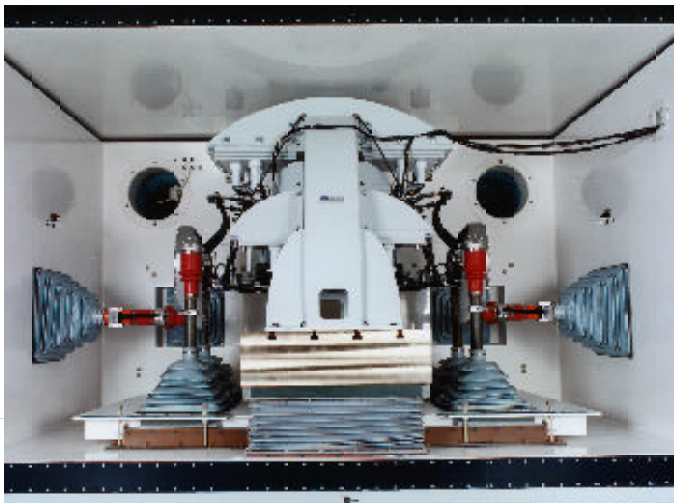

Ex.: Elevating table with manual handling

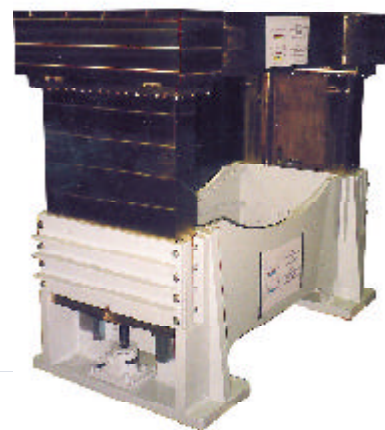

Ex.: Elevating table
with automatic lifting and clamping unit

The elevating table to support our standard axle fixture type EAB II is a steel weldment. Its surface is galvanized, primed and lacquered. In order to adjust it to different axle centerpoints, it consists of a fixed base frame and a separate, height-adjustable table top.

Depending on our customers' requests you can adjust the height mechanically or electrically. In addition you can select manual clamping or automatic clamping with hydraulic released spring clamps.

Elevating table (with standard axle fixture mounted on top)
in a climatic chamber

Corrosion-resistant elevating table
for tests in a climatic and corrosion
chamber: Therefore the table top is
made from aluminium/bronze.
